

NEWS RELEASE

UPI LAUNCHES NEW MAGNAPHOS® FUMIGANT AT THE GEAPS EXCHANGE.

KING OF PRUSSIA, PA, USA – March 23, 2016 – UPI announces the launch of its newest product for the U.S. grain and commodity storage market – MagnaPhos® fumigant. MagnaPhos does generate phosphine gas (like Weevil-Cide®, another UPI fumigant), but it starts as magnesium phosphide.

“MagnaPhos has been sold by UPI in other countries for many years,” says Mike Bandy, UPI product manager. “We are pleased to finally bring MagnaPhos to the U.S. marketplace.” MagnaPhos is favored for commodities that require a shorter exposure time, as well as commodities that have low tolerance to residue. Tobacco storage and lower temperature fumigation situations are two particular areas of interest. Both MagnaPhos and Weevil-Cide are known to control damaging insects in stored grains and other high value commodities.

MagnaPhos fumigant is fully registered in most U.S. states and is currently available for sale from UPI distributors.

About UPI

UPI (United Phosphorus, Inc.) is the North American subsidiary of UPL Limited, a leading global crop protection and seed producing company servicing customers in over 123 countries. Headquartered in Mumbai, India, UPL is dedicated to world-class manufacturing through progressive backward and forward integration of industry leading molecules.
