

New TurnStyle™ insecticide for control of lepidopteran pests.

- Consistent control
- Novel mode of action
- 7 to 14 day residual activity
- Excellent fit for IPM programs
- Pollinator friendly
- Friendly to beneficials
- Tank mix compatible

What TurnStyle Provides

TurnStyle™ insecticide is an excellent choice for control of damaging lepidopteran pests in soybeans, pecans, sweet corn, tomatoes, peanuts and other Eastern US crops. As an insect growth regulator, TurnStyle will not disrupt beneficial insects, mites or pollinators.

Active Ingredient: *Methoxyfenozide*

Signal Word: CAUTION

DOT: Non-regulated

Formulation Type: Suspension concentrate (2.0 lbs ai/gal)

IRAC Group: Group 18, the only key active ingredient in this group

Pack Size: 4 x 1 gal

TurnStyle insecticide

Mode of Action

TurnStyle insecticide mimics the molting hormone of lepidopterous larvae. Upon ingestion it causes premature molting and breaking the life cycle of the pest.

Armyworm

Looper
